EXPLORE

SON TRA

Watching Wildlife and Douc Langurs

ABOUT THE PROGRAM

Visit an iconic treasure of Da Nang, the Son Tra Nature Reserve with the biggest red-shanked douc langur population in South East Asia. Spend a morning/afternoon in this lush coastal rainforest, learn about its plants and finally see the douc langurs and some other wildlife.

Your visit helps to protect these rare animals and their habitat. In addition, it generates income for the Nature Education Center to continue educating 5.000 students and local people every year on skills they'll need to be creative problem solvers and powerful advocates for protecting Da Nang's natural resources.

Our fees

Nature Education
Center

EXPERIENCE

- Climb up the mountain and explore the natural beauty of Son Tra Nature Reserve with our wildlife conservation expert.
- Take a walk on the less traveled back road and learn about plants and wildlife in the forest.
- Observe wildlife and search for the red-shanked douc langurs.
- Enjoy spectacular ocean vistas and city views and embrace peace and tranquility, and fresh air with great photo opportunities.

ABOUT US

GreenViet Biodiversity Conservation Centre is a local non-profit organization established in 2012. Our main focus is on research and conservation, education and advocacy for biodiversity conservation.

GreenViet's Nature Dance Program organizes hands-on, interactive learning activities for students, raises awareness of Son Tra's biodiversity in the community and introduces actions they can take to improve and sustain it. Strongly supported by the local community, we established the Nature Education Centre in 2018 as a place to learn and exchange about Son Tra's nature. We believe that nature education can help protect Son Tra's precious marine and terrestrial resources for future generations towards our goal 'to live in harmony with nature'.
